EDUCATION

Chalmers University of Technology

MSc, Software Engineering and Technology

Gothenburg

Sep 2024 – Present

- Expected Graduation: June 2026
- Course areas: Machine Learning, Requirements Engineering, Project Management, Quality Assurance and Testing

Chalmers University of Technology

BSc, Software Engineering

Gothenburg

Sep 2021 – Jun 2024

- Course Areas: Advanced Programming, Object Oriented Programming, Mathematics, Scrum Projects, Human Interaction Design, Data structures and algorithms

EXPERIENCE

Master Thesis Student

Volvo Cars

Jan 2026 – Present

Gothenburg

- Prototyping an LLM-driven pipeline to automate the verification of automotive embedded systems, specifically targeting the manual bottleneck of mapping requirements to test cases.
- Engineering a semantic analysis tool that parses natural language requirements and correlates them with test source code and signal definition files (DBC, LDF, ARXML).
- Conducting comparative benchmarks to validate the system's ability to identify coverage gaps and improve traceability efficiency against human-expert baselines.

Software Developer

Centiro

Jun 2023 – Aug 2023 | Jun 2024 – Present

Borås

- Develop and maintain scalable software applications using C#, Angular, SQL, and MongoDB.
- Led a complete full-stack redevelopment, migrating data from SQL to MongoDB and building a new Angular frontend, improving performance and UX.
- Collaborate with an agile team to enhance and stabilize financial systems for customers.

PROJECTS

Bachelor's Thesis: Group room bookings made efficient

- Identified key issues with the university's existing booking system (TimeEdit) through user research, including a survey of 130 students, interviews, and stakeholder meetings.
- Designed and developed a high-fidelity mobile app prototype, using Flutter with Firebase for a functional proof-of-concept.
- Validated the design through user testing, including A/B testing and heuristic evaluations. The prototype reduced the average time to book a room from 26.9 seconds to 15.6 seconds compared to the existing system.

Matlåda? (Meal Planner App)

- Developed a collaborative web application designed to simplify weekly meal planning for teams.
- Enabled users to coordinate dietary schedules efficiently through a shared, interactive interface.
- Built using React and Laravel to ensure a responsive and user-friendly experience.

Snapchat Memories Backuper

- Engineered a Python-based archival utility with multi-threaded downloading and GPU-accelerated rendering to merge fragmented image overlays.
- Solved data portability issues by parsing raw HTML exports to reconstruct file hierarchies and inject missing EXIF/MP4 metadata (timestamps, GPS), restoring order to thousands of files.
- Open-sourced the solution for users facing storage paywalls, receiving community feedback describing the tool as a "life saver" for being able to download their memories easily.

SKILLS

Languages: Python, C#, Java, TypeScript, Dart, PHP, HTML, CSS

Frameworks: React, Node.js, Laravel, Angular

Databases: MySQL, PostgreSQL, MongoDB

DevOps & Tools: Docker, Kubernetes, GCP, Azure DevOps, SonarQube, Grafana, Git, Postman, Figma
