EDUCATION

Chalmers University of Technology

Sep 2024 – Present

MSc in Software Engineering and Technology

Gothenburg

- Expected Graduation: June 2026
- Course areas: Machine Learning, Requirements Engineering, Project Management, Quality Assurance and Testing

Chalmers University of Technology

Sep 2021 – Jun 2024

BSc in Software Engineering

Gothenburg

- Course Areas: Advanced Programming, Object Oriented Programming, Mathematics, Scrum Projects, Human Interaction Design, Data structures and algorithms

EXPERIENCE

Master Thesis Student

Jan 2026 – Present

Volvo Cars

Gothenburg

- Developed an AI-based diagnostic framework utilizing Retrieval-Augmented Generation (RAG) to automate alignment assessment between requirements and HIL-test cases.
- Optimized LLM performance through prompt engineering and retrieval strategies.

Software Developer

Jun 2023 – Aug 2023 | Jun 2024 – Present

Centiro

Borås

- Developing and maintaining scalable software applications using C#, Angular, SQL, and MongoDB.
- Led a complete full-stack redevelopment, migrating data from SQL to MongoDB and building a new Angular frontend, improving performance and UX.
- Collaborating within an agile team to enhance and stabilize financial systems for customers.

PROJECTS

Bachelor's Thesis: Group room bookings made efficient

- Identified key issues with the university's existing booking system (TimeEdit) through user research, including a survey of 130 students, interviews, and stakeholder meetings. [cite: 1038]
- Designed and developed a high-fidelity mobile app prototype, using Flutter with Firebase for a functional proof-of-concept.
- Validated the design through user testing, including A/B testing and heuristic evaluations. The prototype reduced the average time to book a room from 26.9 seconds to 15.6 seconds compared to the existing system.

Matlåda? (Meal Planner App)

- Developed a collaborative web application using React and Laravel to simplify weekly team meal planning.
- Designed a shared, interactive interface enabling users to efficiently coordinate dietary schedules.

YellowBox (Snapchat Memories Backuper)

- Engineered a high-performance desktop application using Tauri (Rust) and Svelte to automate the backup of personal cloud data from Snapchat, moving beyond the initial Python-based CLI.
- Developed a cross-platform UI that simplifies complex data portability tasks, such as parsing JSON and reconstructing file hierarchies with injected EXIF/MP4 metadata.
- Open-sourced the solution to help users bypass storage paywalls; received community acclaim for restoring order to thousands of files.

SKILLS

Languages: Python, C#, Java, TypeScript/JavaScript, Dart, PHP, HTML, CSS

Frameworks: React, Node.js, Laravel, Angular

Databases: MySQL, PostgreSQL, MongoDB

DevOps & Tools: Docker, Kubernetes, GCP, Azure DevOps, SonarQube, Grafana, Git, Postman, Figma
